wiedeLandtechnik
CONSULTING – PLANNING – IMPLEMENTING – SERVICE

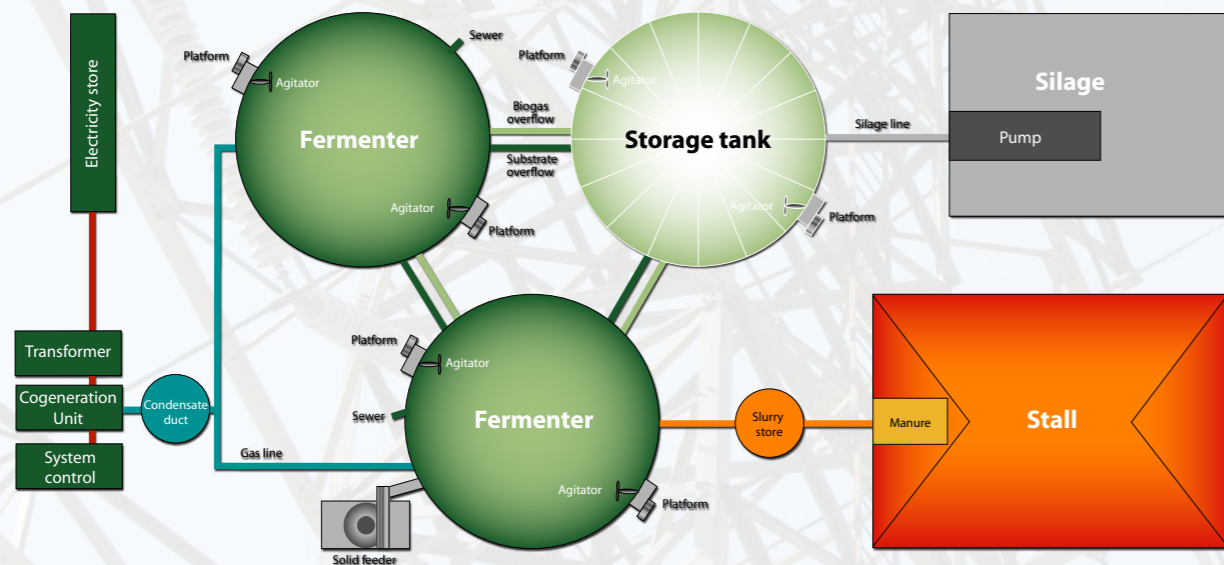

From the first minutes

According to the size of the company

We develop biogas plants that are adapted for your company. From 100 to 500 kW of electric capacity – consulting, planning, executing, implementing, commissioning and service around the whole project - WiedeLandtechnik is your competent partner.

Whether it is modern system control, useful components like a solid feeder, pump systems and motor agitator systems or an EPDM gas storage foil with its advantages. For all components and details as well as for an undisturbed run of your biogas plant we have the suitable solution.

Service and support of your biogas plant with **Eisele** technics

WiedeLandtechnik as Eisele representative is from the first minutes for you there and offers you a biogas plant which is under the constant control even during operation. Experienced service employees guarantee you a reliable operation of your biogas plant also after commissioning.

up to commissioning

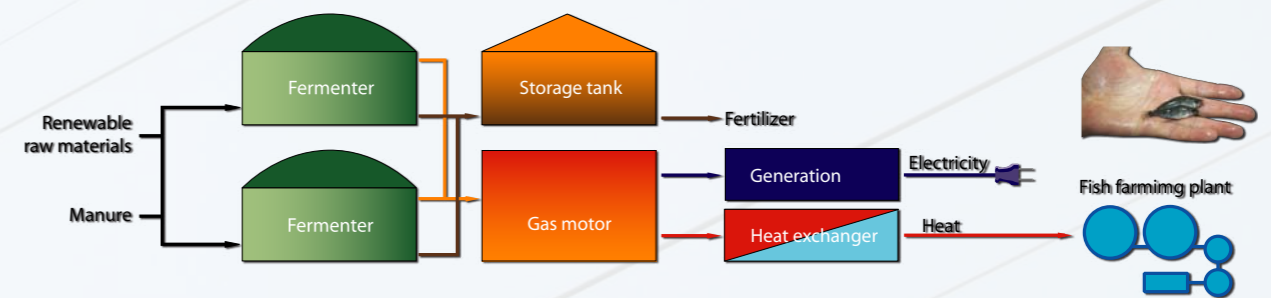

Biological process support

For rapid and reliable analyses as well as for profound consulting during the change of substrates within the fermentation process, WiedeLandtechnik works together with modern scientific laboratories in the field of biogas.

The biological process in the fermenter is optimally set and adapted according to used substrates.

Cogeneration unit

WiedeLandtechnik offers concepts to use the lost heat of your biogas plant. Heating, district heating, greenhouses, poultry mast or the possibility to use our low-energy fish farming modules.

... Naturally

Don't give all to a case.

Planning, implementing and commissioning under the same expert supervision

This guarantees you not only the commissioning in time, there is also complete service under the same partner supervision.
